

RISKS ASSOCIATED WITH PROGRAM-SPECIFIC ACTIVITIES

In addition to the general travel risks outlined in the [Study Abroad Risk Advisory](#), this program Community Health & Native Healing in Hawaii (hereinafter “Program”) has specific activities which may pose a heightened level of risk for participants. UC Davis Study Abroad provides this information so that students can make an informed decision about consenting to participate in the Program. Participants in the Community Health & Native Healing in Hawaii program will be expected to participate in the activities below.

If participants do not want to participate in an activity, they must inform the Faculty Leader or Program Coordinator immediately and ask to opt out. In some cases, an activity may be a required in order to participate on the Program (e.g. travel to another site). In these instances, participants wishing to opt out may not be able to participate in the Program at all and may need to choose another program. Study Abroad will try to keep opt out decisions confidential, but due to the group nature of certain activities (such as group travel/tours), it may be impossible for the decision to be kept confidential.

By participating in in a UC Davis Study Abroad Program, participants voluntarily assume these additional associated risks, both known and unknown. If participants do not ask to opt out, UC Davis Study Abroad will assume they consent to the risks associated with participating in the activities.

- **This Program includes non-traditional non-motorized transportation** both during Program hours and/or as the primary means of transportation for students during free time via (select all that apply):
 - Bicycle
 - Extended walking or hiking

This form of transportation is a common or elective form of public transportation in the country abroad but may have limited or no governmental regulation. This means that equipment or animals may or may not be inspected, that I may be at risk for injury due to contact with animals or their behavior, and that this form of transportation may require my own physical exertion.

- **This Program may include water-based recreational activities such as snorkeling or swimming.** Water sports and activities include elevated risk of injury or death due to weather or water conditions (currents, riptides, storms, lightning, etc.), drowning, hypothermia, equipment failure, contact with a water-borne bacteria or virus, as well as other water-based injuries. Travelers who participate in these activities must be able to swim, even if floatation devices are provided. A lifeguard may not be present at the activity site. Travelers assume additional responsibility for assessing their own comfort and risk tolerance related to prevailing water conditions and equipment on site.

- **This Program requires the use of public transportation.** Travelers on this Program will be required to utilize public transportation (buses, trains, taxis, etc.) as the primary means of conveyance. Travelers may be provided with transportation passes as part of their Program fees. Public transportation services are regulated by local governments and are typically held to minimum standards of repair, safety, timely service and accessibility. Public transportation is often very safe and, in some areas, is the only means of transportation. However, local regulations may differ or be less than those for public transportation that you may be used to. Use of public transportation include the risk of injury from accident (including operator negligence), transit delays, fines or penalties for improper use, impacts or shutdowns related to worker strikes, petty theft and assault, and minimal but elevated risk from terrorist activities.
- **This program includes higher risk associated by participating in clinical rotations on the program.** Students must be fully aware of the risk when working in local clinics. The program does not include work with needles but should students find themselves in situations where needles are present, they must not touch or otherwise be involved in procedures. Nevertheless, medical environments can be fast-paced and chaotic at times so the risk of injury related to needle-stick or other injury is elevated. Even if students have had experience in providing vaccinations or drawing blood, students are prohibited from handling any sharp objects, such as syringes, or taking part in any activities involving sharp objects while on the program. UC Davis and CFHI have well established and standardized emergency procedures in place in the very unlikely event of a needle-stick or any other injuries where you could be exposed to bloodborne pathogens. The on-site CFHI Medical Director will follow the established procedures and provide necessary assistance, such as testing or provision of the standard post-exposure prophylaxis anti-retroviral drug regimen recommended depending on the type of exposure and source. If you are injured or exposed to a needle-stick during the clinical rotation, you must immediately report the incident to a supervisor and contact (or ask someone to contact) UC Davis program staff to help facilitate treatment.
